

Landslide

Landslides are not uncommon when a large amount of rainwater has soaked a natural or artificial slope during a downpour or after a few days of heavy rain.

Safety Guidelines

- Avoid going near or staying around steep slopes during heavy rain or after a few days of heavy rain.
- The oozing out of a large quantity of muddy water from the base or the weep holes of a slope indicates that the slope is saturated with water. Exposure of inner soil of the slope and appearance of new cracks on the slope are early signs of a landslide. Keep away from such slopes.
- Don't proceed by stepping on loose mud if landslide blocks your way; retreat or seek another safe route to leave the scene right away.

Emergency Measures

Unless you are fully equipped and properly trained, don't try to resume life buried in a landslide. You should call for a fully equipped rescue team to avoid further casualties.
